Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Introduction

Become familiar with the main switches and controls on your RX-817VTN before use.

Switches, Buttons and Controls

Refer to the pages in parentheses for details.

Front Panel

- 1 Remote sensor
- 2 Display (10)
- 3 CURSOR MODE button and Indicators (16, 18, 20, 22)
- 4 CSRP button (23)
- 5 MASTER VOLUME control (11)
- 6 LOUDNESS button (12)
- 7 FM MODE/MUTE button (14)
- 8 PRESET button (14)
- 9 TUNING button (13)
- 10 CHARACTER button (15)
- 11 SOURCE SELECTOR (16)
- 12 POWER button and STANDBY indicator (10)
- 13 Preset SEA ON/OFF button (16)
- 14 SP/SEA (Spectrum Peak) Indicator/Sound Equalizing Amplifier button (16)
- 15 FLAT button (16)
- 16 CURSOR buttons (+/-) (16, 18, 20, 22)
- 17 DAP ON/OFF button (17)
- 18 CENTER MODE button (20)
- 19 SURROUND ON/OFF button (20, 22)
- 20 CENTER TONE control (22)
- 21 BALANCE control (11)
- 22 TUNER CONTROL (13, 15)
- 23 VIDEO 2 input jacks (7)
- 24 ENTER button (13, 15)
- 25 SPEAKERS 1/2 buttons (11)
- 26 PHONES jack (12)
- 27 TAPE 2 MONITOR button and indicator (10, 23)

Remote Control

- 1 SLEEP button (24)
- 2 Source selecting buttons (10)
- 3 Sound adjustment buttons (16, 18, 20, 22)
- 4 LIGHTING button (24)
- 5 CONTROL section (TAPE 1, VCR, and TV buttons) (23, 26, 28)
- 6 FADE MUTING (12)
- 7 POWER section (VCR, TV, and AUDIO buttons) (10, 25, 26, 28)
- 8 CONTROL section (DAP, SURR., and SEA buttons) (16, 17, 20, 22)
- 9 Sound mode on/off buttons (16, 17, 20, 22)
- 10 Surround adjustment buttons (18, 21)
- 11 CD CHANGER buttons (25) (TRACK and DISC buttons)
- 12 VOLUME buttons (+/-) (11)

Getting Started

This section explains how to connect stereo components and speakers to the RX-817V TN, and how to connect the power supply.

Before Installation

General

- Be sure your hands are dry.
- Turn the power off to all components.
- Read the manuals supplied with the components you are going to connect.

Locations

- Install the unit in a location that is level and protected from moisture.
- The temperature around the unit must be between 23° and 104° F (-5° and 40° C).
- Make sure there is good ventilation around the unit. Poor ventilation could cause overheating and damage the unit.

Handling the unit

- Do not insert any metal object into the unit.
- Do not disassemble the unit or remove screws, covers, or cabinet.
- Do not expose the unit to rain or moisture.

Checking the Supplied Accessories

Check to be sure you have all of the following items, which are supplied with the RX-817VTN.

- Remote Control (1)
- Batteries (2)
- AM Loop Antenna (1)
- FM Feeder Antenna (1)
- Antenna Adaptor (1)

If anything is missing, contact your dealer immediately.

Connecting the FM and AM Antennas

FM Antenna Connections

Ā| Using the supplied feeder antenna

- ① Attach the feeder antenna to the supplied antenna adaptor as shown in the figure.
- ② Connect the antenna adaptor to the FM 75Ω COAXIAL terminal.
- ③ **Using FM 75-ohm antenna cable (not supplied)**
 ① Open the claws at both ends and remove the cover.
 ② Move the conductor wire from ① to ② using tweezers or similar tool (only when using coaxial cable).
 ③ Fix the coaxial cable and its core.
 ④ Put on the supplied antenna adaptor to the FM 75Ω COAXIAL terminal.

Note:
Make sure the antenna conductors do not touch any other terminals, connecting cords and power cord. This could cause poor reception.

Unfold the loops of the supplied FM feeder antenna and extend them as shown. Fasten them up in the position which gives you the best FM reception.

If reception is poor, connect the outside antenna. Before attaching a 75-ohm coaxial cable (the kind with a round wire going to an outside antenna), disconnect the supplied antenna.

How to strip the 75-ohm coaxial cable

-
1. Strip back the outside covering of the 75-ohm coaxial cable to expose the braided metallic mesh.
 2. Pull the mesh back over the cable as shown.
 3. Strip the insulation about 10 mm back from the central wire.
 4. Attach to the supplied antenna adaptor, as shown in the illustration above.

AM Antenna Connections

Note :
Even when connecting an outside AM antenna, keep the indoor AM loop antenna connected.

Connecting the Speakers

You can connect the following speakers:

- Two sets of front speakers to produce normal stereo sound.
- One set of rear speakers to enjoy the surround effect.
- One center speaker to produce more effective surround effect (to make human voices outstanding).
- One subwoofer speaker to enhance the bass. For connecting a subwoofer, see page 6.

For each speaker, connect one end of the speaker signal cable (not supplied) to the speaker terminal on the rear panel and the other end to the speaker:

1. Open each terminal.
2. Insert the end of the speaker signal cable as shown (be sure to remove the insulation at the end of each wire first).
3. Close the terminals to clamp the speaker signal cables firmly in place.
4. Connect the black (-) and red (+) terminals on the rear panel to the black (-) and red (+) terminals marked on the speakers.

CAUTION:
Use speakers with the same **SPEAKER IMPEDANCE** indicated by the speaker terminals.

Connecting the front speakers

Connect the front speakers to the **FRONT SPEAKERS** terminals.

Connecting the rear and center speakers

Connect rear speakers to the **REAR SPEAKERS** terminals and a center speaker to the **CENTER SPEAKER** terminals.

Note:
When you connect rear speakers, make sure that both left and right speakers are connected; otherwise, no sound will come out of the rear speakers.

Increasing the power for the rear speakers

You can use a separate power amplifier to reinforce sounds through the rear speakers.

1. Connect the input jacks of the power amplifier to the **REAR OUT** jacks on the rear panel.
2. Connect the rear speakers to the speaker terminals of the power amplifier.

Enhancing the bass

You can enhance the bass by connecting a subwoofer. To connect a subwoofer, you also need a separate power amplifier.

1. Connect the input jack of the power amplifier to the **SUB WOOFER OUT** jack on the rear panel.
2. Connect a subwoofer speaker to the speaker terminal of the power amplifier.

Connecting Audio/Video Components

You can connect the following components to the RX-817VTN using cables with RCA pin plugs.

Notes:

- Both plugs and jacks are color-coded; the red ones are for right audio signals, the white ones for left audio signals, and yellow ones for video signals.
- Any turntable incorporating a small-output cartridge such as an MC (moving coil type) must be connected to this amplifier through a commercial head amplifier or step-up transformer. Direct connection may result in insufficient volume.
- If an earth cable is provided for your turntable, connect the cable to the screw marked GND on the rear panel.

Audio component connections

Video component connections

For connecting a video camera

You can use the VIDEO 2 jacks on the front panel, since this jacks are convenient for connecting and disconnecting the component frequently.

Connecting Audio Components for the COMPU LINK-3 Remote Control System

The COMPU LINK-3 remote control system allows you to control other JVC audio components from the RX-817VTN or vice versa. To use this system, connect your JVC audio components and the RX-817VTN with the cable (monaural mini-plug) supplied with those components.

If your audio component has two COMPU LINK-3 SYNCHRO jacks, you can use either one. If it has only one COMPU LINK-3 SYNCHRO jack, connect it so that it is the last item in the series of components. (For example, the turntable in the diagram below)

Notes:

- The COMPU LINK-3 remote control system is the upgraded version of the COMPU LINK-1 and COMPU LINK-2. Even if your component has the COMPU LINK-1 or COMPU LINK-2 jacks, you can still connect it in the COMPU LINK-3 remote control system, but some functions may not work correctly.
- For more information about the COMPU LINK-3 (-1 and -2) remote control system, see page 30.

CAUTION:
The COMPU LINK-3 remote control system cannot control the cassette deck connected to the TAPE 2 jacks. Use only the cassette deck connected to the TAPE 1 jacks.

Connecting Video Components for the AV COMPU LINK Remote Control System

The AV COMPU LINK remote control system allows you to control other JVC video components from the RX-817VTN or vice versa. To use this system, connect your JVC video components and the RX-817VTN with the cable (monaural mini-plug) supplied with those components. For more detailed connection, see page 31.

1. Connect the TV to the jack marked TV.
2. Connect a VCR to either one of the remaining two jacks.

Notes:

- Some VCRs use the AV COMPU LINK jacks for the SWAP editing. However, you cannot use both the AV COMPU LINK remote control and the SWAP editing at the same time. For the SWAP editing, see the manual supplied with the VCR.
- For more information about the AV COMPU LINK remote control system, see page 31.

CAUTION:
The AV COMPU LINK remote control system cannot control the video components connected to the VIDEO 1 and 2 jacks. Use only the video component connected to the VCR jacks.

Basic Operations

The following operations are commonly used when you play any sound source.

Turning the Power On and Off

To turn on the power, press the POWER button on the front panel or the AUDIO button of the POWER section on the remote control.

The STANDBY indicator goes off.

To turn off the power, press the POWER button or the AUDIO button of the POWER section on the remote control again.

The STANDBY indicator lights up.

Selecting the Source to Play

You need to select the source to listen before you start playing any source.

On the front panel:

Turn the SOURCE SELECTOR so that the desired source name appears on the display (at the same time the arrow (▲) on the display points the source).

VCR View the video component connected to the VCR jacks.

VIDEO 1 View the video component connected to the VIDEO 1 jacks.

VIDEO 2 View the video component connected to the VIDEO 2 jacks.

FM Listen to an FM broadcast.

AM Listen to an AM broadcast.

PHONO Listen to a record.

CD Listen to the CD player.

TAPE 1 Listen to the cassette deck connected to the TAPE 1 jacks.

To listen to the cassette deck connected to the TAPE 2 jacks, press the TAPE 2 MONITOR button (or the TAPE 2 button on the remote control) so that the TAPE 2 MONITOR indicator lights up on the front panel ("ON" appears on the display). However, do not press the TAPE 2 MONITOR (or TAPE 2) button if no component is connected to the TAPE 2 jacks; otherwise, no sound comes out of the speakers.

From the remote control:

Press the desired source selecting buttons.

VCR View the video component connected to the VCR jacks.

VIDEO 1 View the video component connected to the VIDEO 1 jacks.

VIDEO 2 View the video component connected to the VIDEO 2 jacks.

FM* Listen to an FM broadcast.

AM* Listen to an AM broadcast.

PHONO* Listen to a record.

CD* Listen to the CD player.

TAPE 1* Listen to the cassette deck connected to the TAPE 1 jacks.

TAPE 2 Listen to the cassette deck connected to the TAPE 2 jacks.

Notes:

- The TAPE 2 MONITOR button on the front panel and the TAPE 2 button on the remote control have a different function from other source selecting buttons, since this button allows you to monitor the recording. For more details, see "Recording Monitor" on page 23.
- When you press one of the source selecting buttons marked above with an asterisk (*), the RX-817VTN automatically turns on.

Power Supply through the RX-817VTN to the Connected Components

You can use the AC outlets on the rear of the RX-817VTN to supply power to audio components. These AC outlets are "switched" outlets. So when the RX-817VTN is off (that is, in standby mode), power is not supplied through these outlets. By turning the RX-817VTN on and off, you can turn the connected components on and off at the same time.

Note:

Do not use the AC outlets on the rear of the RX-817VTN to supply power to the components in the COMPU LINK remote control system; otherwise, the COMPU LINK remote control system may not work correctly.

CAUTION:
Do not plug the components to the AC outlets on the rear if their total power consumption is greater than indicated by the AC outlets.

Connecting the Power Cord

Before plugging the RX-817VTN into an AC outlet, make sure that all connections have been made. When the power cord is connected, the STANDBY indicator above the POWER button lights up.

Keep the power cord away from the connecting cables for the TV, VCR, and antenna. The power cord may cause noise or screen interference. We recommend that you use a coaxial cable to connect the antenna, since it is well-shielded against interference.

Notes:

- A small amount of power is always consumed even in standby mode. To switch off the power completely, unplug the power cord from the AC outlet.
- If the power cord is unplugged or a power failure occurs, preset settings will be erased in a few days.

CAUTIONS:

- Do not touch the power cord with wet hands.
- Do not pull on the power cord to unplug the unit. When unplugging the unit, always grasp the plug itself so as not to damage the cord.

Putting Batteries in the Remote Control

Before using the remote control, put two supplied batteries first. When using the remote control, aim the remote control directly at the remote sensor on the RX-817VTN.

- On the back of the remote control, press down on the battery cover and slide it out.
- Insert batteries. Make sure to observe the proper polarity: (+) to (+) and (-) to (-).
- Slide the cover in.

If the range or effectiveness of the remote control decreases, replace the batteries. Use two R6P (SUM-3/AA (15F) type dry-cell batteries.

CAUTIONS:

- Follow these precautions to avoid leaking or cracking cells:
 - Place batteries in the remote control so they match the polarity indicated: (+) to (+) and (-) to (-).
 - Use the correct type of batteries. Batteries that look similar may differ in voltage.
 - Always replace both batteries at the same time.
 - Do not expose batteries to heat or flame.

Selecting the Front Speakers

When you have connected two sets of front speakers, you can select which to use. Pressing in the SPEAKERS 1 or SPEAKERS 2 button activates the respective set of speakers.

To use the set of speakers connected to the FRONT SPEAKERS ① terminals, press in the SPEAKERS 1 button (=ON), and press out the SPEAKERS 2 button (=OFF).

To use the set of speakers connected to the FRONT SPEAKERS ② terminals, press in the SPEAKERS 2 button (=ON), and press out the SPEAKERS 1 button (=OFF).

To use both sets of speakers, press in both the SPEAKERS 1 and 2 buttons (=ON).

To use neither set of speakers, press out both the SPEAKERS 1 and 2 buttons (=OFF).

Note:
When only one set of the front speakers is connected to either the FRONT SPEAKERS ① or ② terminals, do not press in both SPEAKERS 1 and 2 buttons (=ON). If you do, no sound comes out of the front speakers.

Adjusting the Volume

On the front panel:
To increase the volume, turn the MASTER VOLUME control clockwise.
To decrease the volume, turn it counterclockwise.

From the remote control:
To increase the volume, press the VOLUME + button.
To decrease the volume, press the VOLUME - button.

From the remote control

CAUTION:
Always set the MASTER VOLUME control to the minimum before starting any source. If the MASTER VOLUME control is left turned up, the sudden blast of sound energy can permanently damage your hearing and/or ruin your speakers.

Adjusting the Front Speaker Output Balance

If the sounds you hear from the right and left front speakers are unequal, you can adjust the speaker output balance with the BALANCE control.

To decrease the left channel sound, turn the BALANCE control clockwise.
To decrease the right channel sound, turn it counterclockwise.

Listening at Low Volume (Loudness)

Human ears are not sensitive to bass at low volume. To compensate for this, the loudness function automatically boosts the bass level as you lower the volume.

To use the loudness function, press the LOUDNESS button on the front panel.

The LOUDNESS indicator lights up on the display.

To turn the function off, press the LOUDNESS button again.

The LOUDNESS indicator goes off.

Recording a Source

You can record any source playing through the RX-817VTN to the cassette decks connected to the TAPE 1 and TAPE 2 jacks, and the VCR connected to the VCR jacks at the same time.

While recording, you can listen to the selected sound source at whatever sound level you like, without affecting the sound levels of the recording.

Notes:

- When recording from the cassette deck connected to the TAPE 2 jacks to the one connected to TAPE 1, press TAPE 2 MONITOR button and select a source other than TAPE 1.
- The output volume level, preset SEA modes and surround effects will not affect the recording.
- See also "Recording Monitor" on page 23.

Listening with Headphones

A standard pair of headphones can be connected to the PHONES jack on the front panel. Be sure to turn down the volume before connecting or putting on headphones, as high volume can damage both the headphones and your hearing.

To listen with only headphones
Press out both the SPEAKERS 1 and 2 buttons (=OFF).

Muting the Sound

You can easily turn off the volume by pressing the FADE MUTING button on the remote control.

To mute the sound through all speakers and headphones connected
Press the FADE MUTING button so that "MUTING" appears on the display and the VOLUME control turns down.

To cancel the mute, turn the VOLUME control clockwise on the front panel or press the VOLUME + button (or the VOLUME - button) on the remote control.

Receiving Radio Broadcasts

You can browse through all the stations or use the preset function to go immediately to a particular station.

Tuning in Stations Manually

1. Select the band.

On the front panel:

Turn the SOURCE SELECTOR.

From the remote control:

Press the FM button or the AM button so that the last received station is tuned in.

Note:

If you do not see a preset channel number on the display, the RX-817VTN is already in the manual tuning mode, so skip Step 2 below.

2. Press the TUNING button to set the tuning mode to the manual mode.

3. Turn the TUNER CONTROL clockwise or counterclockwise.

Tuning it clockwise increases the frequency.

Tuning it counterclockwise decreases the frequency.

Notes:

- When you turn the TUNER CONTROL fast, the frequency keeps changing until you turn the TUNER CONTROL again or a station is tuned in.
- When a station of sufficient signal strength is tuned in, the TUNED indicator lights up on the display. When an FM stereo program is received, the STEREO indicator also lights up.

Using the Preset Tuning

Once a station is assigned to a channel number, the station can be quickly tuned. You can preset up to 40 stations, either AM, FM, or a mixture of both, at random.

Storing the preset stations

1. Tune in the station you want to preset (see above).

2. Press the ENTER button.

"CH: ---" appears on the display for 5 seconds.

3. Select a channel number within the 5 seconds.

On the front panel:

Turn the TUNER CONTROL.

From the remote control:

Press the TUNER PRESET + button or TUNER PRESET - button to select a channel number, or:

Press the 10 keys to directly select a channel number.

Examples: For channel number 5, press 5. For channel number 15, press +10 then 5.

For channel number 20, press +10 then 10.

Note:

When you use the remote control, be sure that the remote control are activated for tuner, not for the CD and others. (See page 24.)

4. Press the ENTER button again while the selected channel number is flashing on the display.

The selected channel number stops flashing, and the station is assigned to the selected channel number.

To cancel a stored preset station

Storing a new station on a used number erases the previously stored one.

CAUTION:

Preset stations may be erased when power is cut off to the RX-817VTN, as when it is unplugged from the AC outlet or a power failure occurs. If the preset stations are lost, simply set the stations again using the above procedure.

Tuning in a Preset Station

On the front panel:

1. Turn the SOURCE SELECTOR to select either FM or AM.

The last received station of the selected band is tuned in.

Note:

If you see a preset channel number on the display, the RX-817VTN is already in the preset tuning mode, so skip Step 2 below.

2. Press the PRESET button to set the tuning mode to the preset mode.

3. Turn the TUNER CONTROL to select a preset channel number.

Tuning it clockwise changes preset channels in increasing order.

Tuning it counterclockwise changes preset channels in decreasing order.

On the remote control:

1. Press the FM button or the AM button.

The last received station of the selected band is tuned in.

2. Press the TUNER PRESET + or TUNER PRESET - to select a preset channel number, or:

Press the 10 keys to directly select a preset channel number.

Examples: For channel number 5, press 5. For channel number 15, press +10 then 5.

For channel number 20, press +10 then 10.

Note:

When you use the remote control, be sure that the remote control are activated for tuner, not for the CD and others. (See page 24.)

Selecting the FM Reception Mode

You can change the FM reception mode so that reception will be improved.

When an FM stereo broadcast is hard to receive or noisy

Press the FM MODE/MUTE button on the front panel. The MUTE AUTO indicator goes off on the display. Reception will be improved although you will lose the stereo effect. In this mode, you will hear noise while tuning into the stations.

To restore stereo effect

Press the FM MODE/MUTE button again so that the MUTE AUTO indicator lights up on the display. In this mode, when a program is broadcast in stereo, you will hear stereo sound; when in monaural, you will hear monaural sounds. This mode is also useful to suppress static noise between stations.

Assigning Names to Preset Stations

You can assign a name of up to four characters to each preset station (from channel number 1 to 20). When a preset station is tuned in, its assigned name will appear on the display.

On the front panel only:
1. Tune in a preset station (channel number 1 to 20). See page 14 for details.

2. Press the CHARACTER button.
The cursor appears at the first character position.

3. Turn the TUNER CONTROL to select the first character.
You can use characters listed below.

4. When the character you want appears, press the CHARACTER button.
The cursor moves to the next character position.

5. Repeat Steps 3 and 4 to enter up to four characters.
6. Press the ENTER button after you have assigned a name.

To erase the input characters
Insert blanks using the same procedure described above.

Using the Preset SEA Modes

The RX-817VTN has five preset SEA (Sound Effect Amplifier) modes (COUNTRY, JAZZ, ROCK, MUSICAL, and MOVIE) which give you control of the way your music sounds, so you can create it for your room and for the quality of the source.

On the front panel:

1. Press the ON/OFF button under the PRESET SEA Indicator so that the SEA Indicator lights up on the display.
Now the previously selected preset SEA mode comes into effect.
2. Press the left or right cursor button (+/-) to select a preset SEA mode.
Pressing the button changes the preset SEA modes in the following sequence:

- COUNTRY:** Enhances the high frequency range so that instruments such as a violin and banjo sound outstanding.
JAZZ: Gives a feeling of a live atmosphere. Good for acoustic music.
ROCK: Gives a heavy sound. Both high and low frequencies are boosted.
MUSICAL: Enhance the mid-frequency range which human voice is mostly made up of.
MOVIE: Adds breath to sounds so you feel like you are in a movie theater.

Note:
When using the cursor buttons, make sure that the PRESET SEA Indicator on the front panel is turned on. If not, press the CURSOR MODE button once so that the cursor buttons can be used for selecting a preset SEA mode and its level.

3. Press the upper or lower cursor button (+/-) to select the level (from 1 to 5) of the preset SEA mode selected in above step.
Pressing the upper cursor button (+) increases the SEA preset level.
Pressing the lower cursor button (-) decreases the SEA preset level.

From the remote control:

1. Press the SEA button of the CONTROL section.
Now you can use the remote control for selecting the SEA modes.
2. Press the SEA ON/OFF button so that the SEA Indicator lights up on the display.
Now the previously selected preset SEA mode comes into effect.
3. Press the SEA MODE button.
Each time you press the button, the preset SEA modes changes.
4. Press the SEA PRESET button repeatedly.
Each time you press the button, the SEA preset level changes.

To flatten the equalizing curve while using the preset SEA modes
Press the FLAT button on the front panel so that "SEA FLAT" appears on the display.

To compare the original sound and the sound processed by using the preset SEA modes
Press the ON/OFF button on the front panel for the preset SEA modes repeatedly. (When using the remote control, press the SEA ON/OFF button.)
• While the SEA indicator is turned on, you can listen to the processed sound.
• While the SEA indicator is turned off, you can listen to the original sound.

To see the actual sound output level on the display (Spectrum Peak Indicator mode)
Press the SPI/SEA button on the front panel so that the actual sound output level can be shown in 7 frequency ranges on the display.
To cancel it, press the button again.

Using the Digital Surround Processor

The built-in digital surround processor provides two groups of programs — DAP (Digital Acoustic Processor) modes and surround modes (Dolby Surround® and JVC Theater Surround). You cannot use these DAP modes and surround modes at the same time.

Notes:

- The digital surround processor has no effect on monaural sources.
- The digital surround processor cannot be used for recording.
- * Manufactured under license from Dolby Laboratories Licensing Corporation. Additionally licensed under one or more of the following patents: U.S. number 3,959,590; Canadian number 1,004,603 and 1,037,877. "Dolby", "Pro Logic", and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

What can the digital surround processor do?

The sound heard in a concert hall or a movie theater consists of direct sound and indirect sound: early reflections and reflections from behind. The reflected sounds are always delayed by the distances of the ceiling and walls from the listener. The early reflections are some of the most important elements of the acoustic surround. So, what the digital surround processor does is to reproduce these elements in your listening room.

Using the DAP Modes

You need to connect the front and rear speakers to enjoy the DAP modes — HALL, L(live) CLUB, PAVILION, D(dance) CLUB. By using these modes, the sound field can be enlarged to give a more realistic sound. The DAP modes do not require the center speaker.

When you use these four modes, you can adjust the output level of the rear speaker output and the effect depth. Once you have adjusted these, the RX-817VTN memorizes the setting for each mode.

Among the DAP modes, H PHONES (headphones) is very special and newly developed by JVC. It can create the same stereo sound as you can listen from the speakers in air. So, when you listen to a source using headphones, you can feel as if you were not using headphones.

1. Set the DAP mode on.

On the front panel:

Press the DAP ON/OFF button so that the DAP indicator lights up on the display. When you have selected H PHONES (headphones) previously, the H-PHONE indicator also lights up on the display.

From the remote control:

I-1 Press the DAP button of the CONTROL section.

I-2 Press the DAP ON/OFF button so that the DAP indicator lights up on the display. When you have selected H PHONES (headphones) previously, the H-PHONE indicator also lights up on the display.

On the front panel

From the remote control

2. Select the mode you want.

On the front panel:

Press the left or right cursor button (+/-) repeatedly until the mode you want appears on the display.

From the remote control:

Press the DAP/SURROUND MODE button repeatedly until the mode you want appears on the display.

Each time you press the button, the DAP modes change as follows (when using the button on the remote control, it changes only rightward):

HALL: Gives clear vocal and the feeling of a concert hall.

L CLUB: Gives the feeling of a live music club with the low ceiling.

PAVILION: Gives the spacious feeling of a pavilion with the high ceiling.

D CLUB: Gives a throbbing bass beat.

H PHONES: Gives a spacious stereo effect when listening with headphones.

Note:

When using the cursor buttons on the front panel, make sure that the DAP/SURROUND indicator is turned on. If not, press the CURSOR MODE button once so that the cursor buttons can be used for selecting the DAP modes.

3. Set the output levels of the rear speakers.

From the remote control only:

Press the REAR + button or the REAR - button to set the sound level of the rear speakers.

Note:

When you have selected H PHONES (headphones) in Step 2 above, you cannot set the output levels of the rear speakers.

4. Select the effect depth among 5 preset levels.

On the front panel:

Press the upper or lower cursor button (+/-) repeatedly.

To increase the effect depth, press the upper cursor button (+), and to decrease it press the lower cursor button (-).

From the remote control:

Press the EFFECT button repeatedly. Selecting the higher number makes the effect deeper.

Each time you press the button, the effect depth changes as follows (when using the button on the remote control, it changes only rightward):

Note:

When you have selected H PHONES (headphones) in Step 2 above, you cannot select the effect depth.

Using the Surround Modes

You can enjoy two types of surround modes — Dolby Surround and JVC's Theater Surround.

On Dolby Surround

The Dolby Surround has been also developed to reproduce the important elements of the acoustic surround at home.

To watch the soundtracks of video software bearing the mark  which includes the same encoded surround information as found in Dolby Stereo films, the RX-817VTN can provide you with 2 Dolby Surround modes (Dolby Pro Logic and Dolby 3ch Logic).

Dolby Pro Logic: Select this mode when optional rear speakers are connected.

Dolby 3ch Logic: Select this mode when a center speaker is connected without rear speakers.

On JVC's Theater (1 and 2) Surround

In order to reproduce a more realistic sound field in your listening room while playing soundtracks of video software bearing the mark , JVC's Theater Surround has been designed to give you clearer vocals and to create the feeling of being there. The sound is reproduced through the front speakers, rear speakers, and center speaker.

Speaker arrangements for surround modes

The following illustrations show how to obtain the optimum sound environment for various surround settings. Try to find the speaker direction and location to create the optimum sound field.

Preparing for the surround modes

The RX-817VTN memorizes surround adjustments for each mode.

1. Set the surround mode on.

On the front panel:

Press the SURROUND ON/OFF button so that one of the surround mode indicators (THEATER, PRO LOGIC, or 3CH LOGIC) lights up on the display.

From the remote control:

I-1 Press the SURR. button of the CONTROL section.

I-2 Press the SURROUND ON/OFF button so that one of the surround mode indicators lights up on the display.

2. Select the mode you want.

On the front panel:

Press the left or right cursor button (+/-) repeatedly until the mode you want appears on the display.

From the remote control:

Press the DAP/SURROUND MODE button repeatedly until the mode you want appears on the display.

Each time you press the button, the surround modes change as follows (when using the button on the remote control, it changes only rightward).

PRO LOGIC: Use this mode to watch a video tape with Dolby Surround when you have connected the rear speakers.

3CH LOGIC: Use this mode to watch a video tape with Dolby Surround when you have connected a center speaker and no rear speakers.

THEATER 1: Use this mode to watch a video tape with Dolby Surround when you have connected the rear speakers.

This mode gives you the feeling of a small movie theater with a seating capacity of 100.

THEATER 2: Use this mode to watch a video tape with Dolby Surround when you have connected the rear speakers.

This mode gives you the feeling of a large movie theater with a seating capacity of 1000.

Note:
When using the cursor buttons on the front panel, make sure that the DAP/SURROUND indicator is turned on. If not, press the CURSOR MODE button once so that the cursor buttons can be used for selecting the surround modes.

3. Set the center mode.

On the front panel only:

Press the CENTER MODE button.

Each time you press the CENTER MODE button, the mode changes as follows.

PHANTOM: Select this mode when you have not connected a center speaker.

NORMAL: Select this mode when the size of the center speaker is smaller than that of the front speakers.

WIDE: Select this mode when the size of the center speaker is the same as that of the front speakers.

OFF: Select this mode to shut off the output of the center channel signal.

Note:
When you have selected 3CH LOGIC in Step 2 above, you cannot select PHANTOM.

Enjoying the surround modes

4. Set the delay time of the delayed sound.

From the remote control only:

Press the DELAY button.

Each time you press the button, the delay time changes among 4 levels.

DELAY-1: When your distance to your rear speakers is greater than that to the front speakers.

DELAY-2: When your distance to your rear speakers is almost equal to that to the front speakers.

DELAY-3: When your distance to your rear speakers is a little less than that to the front speakers.

DELAY-4: When your distance to your rear speakers is much less than that to the front speakers.

Note:

When you have selected 3CH LOGIC in Step 2 above, you cannot adjust the delay time.

5. Start checking speaker output balance.

From the remote control only:

Press the TEST button.

When you press the button, "TEST" starts flashing and a test tone comes out of speakers in the following order:

6. Set the output levels of the center and the rear speakers.

From the remote control only:

Press the CENTER + button or the CENTER - button to set the sound level of the center speaker.

Press the REAR + button or the REAR - button to set the sound level of the rear speakers.

Notes:

- You can adjust these levels in 1 dB step within the range of ± 10 dB. The sound levels of the left and right rear speakers will be the same.
- You cannot set the sound level of the rear speakers when you have selected 3CH LOGIC.
- You cannot set the sound level of the center speaker when you select PHANTOM or OFF for center mode.

7. Finish checking speaker output balance.

From the remote control only:

Press the TEST button again.

The test tone stops.

Note:

When you use the SOURCE SELECTOR, the test tone also stops.

8. Select the effect depth among 5 preset levels only for JVC's Theater Surround.

On the front panel:

Press the upper or lower cursor button (+/-) repeatedly.
To increase the effect depth, press the upper cursor button (+), and to decrease it press the lower cursor button (-).

From the remote control:

Press the EFFECT button repeatedly. Selecting the higher number makes the effect deeper.
Each time you press the button, the effect depth changes as follows (when using the button on the remote control, it changes only rightward):

Note:

When you have selected Dolby Surround modes in Step 2 above, you cannot select the effect depth.

Once you have set the surround adjustments you can use the same adjustments every time you want to enjoy the surround you want.

On the front panel:

1. Press the SURROUND ON/OFF button so that one of the surround mode indicators lights up on the display.

2. Press the left or right cursor button (+/-) repeatedly until the surround mode indicator you want lights up.

Each time you press the button, the display changes to show the following:

Note:

When using the cursor buttons on the front panel, make sure that the DAP/SURROUND indicator is turned on. If not, press the CURSOR MODE button once so that the cursor buttons can be used for selecting the surround modes.

3. Play a sound source which was processed with Dolby Surround and is labeled with

To cancel the surround, press the SURROUND ON/OFF button again.

From the remote control:

1. Press the SURR. button of the CONTROL section.

Now you can use the remote control for selecting the surround modes.

2. Press the SURROUND ON/OFF button so that one of the surround mode indicator lights up on the display.

3. Press the DAP/SURROUND MODE button repeatedly until the surround mode indicators you want lights up.

Each time you press the button, the display changes to show the following:

4. Play a sound source which was processed with Dolby Surround and is labeled with

To cancel the surround, press the SURROUND ON/OFF button again.

To make dialogues in movies softer or clearer

By using the CENTER TONE control, you can adjust the level of mid-frequency range, which the human voice is mostly made up of.

To make dialogues clearer, turn the control toward SHARP.

To make them softer, turn the control toward SOFT.

When set to the FLAT position, no adjustment is applied.

Note:

The CENTER TONE control cannot be used when sounds do not come out of the center speaker.

On the front panel

From the remote control

Other Features

The RX-817VTN has some other features like the recording monitor function, the CSRP function and the sleep timer. By using these useful features your audio life will be much improved. The remote control system is more precisely described in this section.

Recording Monitor

On the front panel

From the remote control

If the cassette deck connected to the TAPE 2 jacks is of the three-head type, you can compare the sound quality of the playing source and of the recording being made on the cassette deck.

To use the recording monitor function

Press the TAPE 2 MONITOR button on the front panel or the TAPE 2 button on the remote control. The TAPE 2 MONITOR indicator lights up on the front panel. You can hear the sound just recorded on the tape.

To cancel recording monitor function

Press the TAPE 2 MONITOR button or the TAPE 2 button again. The TAPE 2 MONITOR indicator goes off, and you hear the sound from the source playing.

Notes:

- Refer also to the manual supplied with your cassette deck.
- Do not press the TAPE 2 MONITOR (or TAPE 2) button if no component is connected to the TAPE 2 jacks; otherwise, no sound comes out of the speakers.

Using the CSRP Function

The optimum sound settings differ for each playing source. So, you have to change settings each time you select a different source.

The JVC's CSRP (COMPLINK Source-Related Preset) function is used to assign and store different sound settings for each different playing source. By using this function, you don't have to change the settings every time you change the source. The stored settings for the newly selected source are automatically recalled.

The following can be stored for each source:

- Loudness (see page 12)
- Preset SEA modes (see page 16)
- DAP or Surround settings (see pages 17 and 20)

Notes:

- For the cassette deck connected to the TAPE 2 jacks, the CSRP function does not work.
- If the source is FM or AM, the CSRP function works only when one of the preset channels from 1 — 20 is tuned in. You can assign a different setting for each preset channel.

To store the sound settings by using the CSRP function

1. Press the CSRP button on the front panel.
The CSRP indicator starts flashing and remains lit on the display.

2. Select the sound effects listed above while the CSRP indicator is lit on the display.

To recall the sound settings

Whenever the CSRP indicator is lit on the display, the settings for the currently selected source is always recalled.

When you change the source, it takes several seconds to activate the CSRP function (the CSRP indicator blinks and the stored settings are shown on the display).

To cancel the CSRP function, press the CSRP button so that the CSRP indicator goes off from the display. (Even though the CSRP function is cancelled, recalled sound effects remains active.)

Using the Sleep Timer

Using the sleep timer, you can fall asleep to music and know the RX-817VTN will turn off by itself rather than play all night.

To set the sleep timer

Press the SLEEP button on the remote control repeatedly while playing a source. The SLEEP indicator lights up on the display.

Each time you press the button, the shut-off time shown on the display changes as shown below:

The RX-817VTN will turn off after the time you have set.

To check or change the time remaining until the shut-off time

Press the SLEEP button once. The remaining time is displayed in minutes. If you press the button repeatedly, you can change the shut-off time.

To cancel the sleep timer

Press the SLEEP button repeatedly until the SLEEP indicator goes off.

Using the Remote Control

You can operate JVC's audio and video components with this receiver's remote control, since control signals for JVC components are preset in the remote control.

To operate these components with the remote control, first select a source with the source selecting buttons on the remote control. Then, operate that source using the remote control.

Note:

If you choose a source on the front panel directly, the remote control will not operate that source. To operate a source with the remote control, the source must be selected using buttons on the remote control.

To check which source the remote control is activated for

Press the LIGHTING button on the left side of the remote control.

One of the source selecting buttons is backlit for a while to inform you that the remote control is activated for the backlit source. (Some other buttons are also backlit to show these buttons can be used for the backlit source.)

- If the remote control is activated for either FM or AM, both the FM and AM buttons are backlit.
- If the remote control is activated for TV, no source selecting buttons are backlit.

Turntable

After pressing the PHONO button, you can perform the following operations on a turntable:

- ▶ Starts playing.
- Stops playing.

CD player

After pressing the CD button, you can perform the following operations on a CD player:

- ▶ Starts playing.
- ▶ Fast reverses the CD.
- ▶ Fast forwards the CD.
- ▶ Returns to the beginning of the current track.
- ▶ Skips to the beginning of the next track.
- Stops playing.
- Stops playing temporarily. To release it, press ▶.
- 1 — 10, +10 Selects a track number directly.

To select track number 5, press 5. For track number 15, press +10, then 5. For track number 20, press +10, then 10.

CD player-changer

By using the buttons of the CD CHANGER section, you can perform the following operations on a CD player-changer:
After pressing the DISC button, you can select the discs loaded in the CD player-changer and the playing mode:
1 — 6, 7/P Select the number of a disc installed in a CD player-changer. Then continue to operate the CD player as described above.

CONTINUE Sets the playing mode to the CONTINUE mode.
PRGM Sets the playing mode to the PROGRAM mode.
After pressing the TRACK button, you can select one of the track in the CD using the 10 keys.

Note:
If you have the CD player-changer XL-MC100C and XL-MC100M, 1 — 6 buttons function as the DISC SKIP button.

- Press 2, 4, or 6 to skip to the next disc.
- Press 1, 3, or 5 to skip back to the previous disc.

Cassette deck

After pressing the TAPE 1 button, you can perform the following operations on a cassette deck:

- ▶ Starts playback.
- ▶ Fast winds the tape from right to left.
- ▶ Fast winds the tape from left to right.
- ▶ Returns to the beginning of the current recording.
- ▶ Skips to the beginning of the next recording.
- ▶ Stops operation.
- ▶ Stops playing or recording temporarily. To release it, press ▶.
- ▶ Press this button with ▶ to start recording.
- ▶ Press this button with ■ to enter the recording standby mode.

Note:
You can use either one of the TAPE 1 buttons (one as the source selecting button on the SOURCE SELECT section; the other on the CONTROL section). If you press the one on the CONTROL section, you can operate the cassette deck using the remote control, but the playing source will not be changed to TAPE 1.

VCR

After pressing the VCR button, you can perform the following operations on a VCR:

- ▶ Starts playback
- ▶ Rewinds a tape
- ▶ Fast winds a tape
- ▶ Stops operation.
- ▶ Stops playing or recording temporarily. To release it, press ▶.
- ▶ Press this button with ▶ to start recording.
- ▶ Press this button with ■ to enter the recording standby mode.
- ▶ VCR ch +/- Changes the TV channels on the VCR.
- ▶ 1 — 9, 0 Selects the TV channels.

Note:
You can use either one of the VCR buttons (one as the source selecting button on the SOURCE SELECT section; the other on the CONTROL section). If you press the one on the CONTROL section, you can operate the VCR using the remote control, but the playing source will not be changed to VCR.

TV

You can also perform the following operations on a TV
TV (of the CONTROL section)

- ▶ Changes the input mode to TV.
- ▶ TV VOL. +/- Adjusts the TV volume.
- ▶ TV ch +/- Changes the TV channels.
- ▶ 1 — 9, 0 Selects the TV channels.

Note:
You can also turn the VCR and the TV on and off by pressing the VCR button and TV button of the POWER section on the remote control.

Operating Other Manufacturers' Components

The remote control supplied with the RX-817VTN can transmit control signals for other manufacturers' TVs and VCRs. By changing the transmittable signals from preset ones to the other manufacturers', you can operate the other manufacturer's components using this remote control.

When operating the other manufacturers' components, refer also the manuals supplied with them.

To change the transmittable signals for operating another manufacturer's TV

1. Press and hold the TV button of the POWER section on the remote control until the all procedures are completed.
2. Press the TV button of the CONTROL section once.
3. Enter the manufacturer's code (three digits) using buttons 1 — 9, and 0. See the lists on page 27 to find the code.
4. Release the TV button of the POWER section.

TV (of the POWER section)

Turns on and off TV.

After pressing the TV button of the CONTROL section, you can perform the following operations on the TV:

- ▶ TV VOL. +/- Adjusts the TV volume.
- ▶ TV ch +/- Changes the TV channels.
- ▶ 1 — 10, 0, +10 Selects the TV channels.

To change the transmittable signals for operating another manufacturer's VCR

1. Press and hold the VCR button of the POWER section on the remote control until the all procedures are completed.

2. Press the VCR button of the CONTROL section once.

3. Enter the manufacturer's code (three digits) using buttons 1 - 9, and 0. See the lists on page 29 to find the code.

4. Release the VCR button of the POWER section. The following buttons can be used for operating the VCR:

VCR (of the POWER section)

Turns on and off VCR.

After pressing the VCR button of the CONTROL section, you can perform the following operations on the VCR:

- ▲ Starts playback
- ◀ Rewinds a tape
- ▶ Fast winds a tape
- Stops operation.
- Stops playing or recording temporarily. To release it, press ▶
- Press this button with ▶ to start recording.
- Press this button with II to enter the recording standby mode.
- VCR ch +/- Changes the TV channels on the VCR.
- 1 - 10, 0, +10 Selects the TV channels on the VCR.

COMPU LINK Remote Control System

**COMPU LINK
III Remote III
Control System**

The COMPU LINK remote control system allows you to operate JVC audio components through the remote sensor on the RX-817VTN.

To use this remote control system, you need to connect JVC audio components through the COMPU LINK-3 SYNCHRO jacks (see page 8) in addition to the connections using cables with RCA pin plugs (see page 7). This remote control system allows you to use four functions listed below.

■ **Remote Control through the Remote Sensor on the RX-817VTN**

You can control all components through the remote sensor on the RX-817VTN using this remote control. For details, see page 24.

Note:

Aim the remote control directly at the remote sensor on the RX-817VTN.

■ **Automatic Source Selection**

When you press the play (▶) button on a connected component or on its own remote control, the RX-817VTN automatically turns on and changes the source to the component. On the other hand, if you select a new source on the RX-817VTN or the remote control, the selected component begins playing immediately. In both cases, the previously selected source continues playing without sound for a few seconds.

■ **Automatic Power On/Off (only possible with the COMPU LINK-3 connection)**

Both the CD player and cassette deck turns on and off along with the RX-817VTN.

When you turn on the RX-817VTN, the CD player or cassette deck will turn on automatically, depending on which component has been previously selected.

When you turn off the RX-817VTN, both the CD player and cassette deck will turn off.

■ **Synchronized Recording**

Synchronized recording means the cassette deck starts recording as soon as a CD or a record begins playing.

To use synchronized recording, follow these steps:

- 1 Put a tape in the cassette deck, and a disc in the CD player (or a record on the turntable).
- 2 Press the record (●) button and the pause (H) button on the cassette deck at the same time. This puts the cassette deck into recording pause.

Note:

If you do not press the record (●) button and pause (H) button at the same time, the synchronized recording feature will not operate.

3 Press the play (▶) button on the CD player or on the turntable.

The source changes on the RX-817VTN, and as soon as play starts, the cassette deck starts recording. When the play ends, the cassette deck enters recording pause, and stops about 4 seconds later.

Notes:

- During synchronized recording, the selected source cannot be changed.
- If your CD player is playing in program mode, a 4-second blank is recorded between tracks so that the music scan feature of your cassette deck can be used on the recorded tape.
- If the power of any component is shut off during synchronized recording, the COMPU LINK remote control system may not operate properly. In this case, you must start again from the beginning.
- Refer also to the manuals supplied with your audio components.

The AV COMPU LINK remote control system allows you to operate JVC video components through the RX-817VTN.

AV COMPU LINK

To use this remote control system, you need to connect JVC video components through the AV COMPU LINK jacks (see page 8) in addition to the connections using cables with RCA pin plugs (see page 7). However, this remote control system cannot control video components connected to the VIDEO 1 and VIDEO 2 jacks. So, when you connect the VCR you want to operate using the AV COMPU LINK remote control system, connect it to the VCR jacks.

This remote control system allows you to use three functions listed below.

■ Remote Control of the TV through the Remote Sensor on the RX-817VTN

You can control the TV through the remote sensor on the RX-817VTN using this remote control. For details, see page 25.

Note:
Aim the remote control directly at the remote sensor on the RX-817VTN when operating the TV. (However, to operate the VCR, always aim the remote control directly at the remote sensor on the VCR.)

■ One-Touch Video Play

Simply by inserting a video cassette without its safety tab into the VCR, you can enjoy the video playback without setting other switches manually.

The RX-817VTN automatically turns on and changes the source to the VCR.

The TV automatically turns on and changes the input mode to the position you can view the VCR playback. When you insert a video cassette with its safety tab, press the play (▶) button on VCR or on the remote control. So, you can get the same result.

■ Automatic Power On/Off

Both the TV and the VCR turn on and off along with the RX-817VTN.

When you turn on the RX-817VTN;

- If the previously selected source is VCR, the TV and VCR will turn on automatically.
 - If the previously selected source is VIDEO 1 and VIDEO 2, only the TV will turn on automatically.
- When you turn off the RX-817VTN, both the TV and VCR will turn off.

Notes:

- If you turn off the RX-817VTN while recording on the VCR, the VCR will not turn off, but continue recording.
- Refer also to the manuals supplied with your video components.

Use this chart to help you solve daily operational problems. If there is any problem you cannot solve, contact your JVC service center.

PROBLEM	POSSIBLE CAUSE	SOLUTION
The display does not light up.	The power cord is not plugged in.	Plug the power cord into an AC outlet.
No sound from speakers.	Speaker wires are not connected.	Check speaker wiring and reconnect if necessary.
	The SPEAKERS buttons are not set correctly.	Press the SPEAKERS buttons in or out correctly.
	An incorrect source is selected.	Select the correct source.
	The TAPE 2 MONITOR indicator lights up when no component is connected to the TAPE 2 jacks.	Press the TAPE 2 MONITOR button so that the indicator goes off.
Sound from one speaker only.	Speaker wires are not connected properly.	Check speaker wiring and reconnect if necessary.
	The BALANCE control is set to one extreme.	Adjust the BALANCE control properly.
Continuous hiss or buzzing during FM reception.	Incoming signal is too weak.	Adjust the antenna.
	The station is too far away.	Select a new station.
	An incorrect antenna is used.	Check with your dealer to be sure you have a correct antenna.
	Antennas are not connected properly.	Check connections.
Occasional cracking noise during FM reception.	Ignition noise from automobiles.	Move the antenna farther from automobile traffic.
Howling during record playing.	Your turntable is too close to speakers.	Move speakers away from the turntable.
Remote control does not work.	There is an obstruction in front of the remote sensor on the RX-817VTN.	Remove the obstruction.
	Batteries are weak.	Replace batteries.

Specifications (RX-817VTN)

Specifications

Amplifier	
Output Power	At Stereo operation 105 watts per channel, min. RMS, both channels driven into 8 ohms, 20 Hz to 20 kHz with no more than 0.007% total harmonic distortion.
	At Surround operation Front Channels 105 watts per channel, min. RMS, driven into 8 ohms at 1 kHz with no more than 0.7% total harmonic distortion.
	Center channel 105 watts, min. RMS, driven into 8 ohms at 1 kHz, with no more than 0.7% total harmonic distortion.
	Rear channels 25 watts per channel, min. RMS, driven into 8 ohms at 1 kHz, with no more than 0.7% total harmonic distortion.
Total Harmonic Distortion (8 ohms, 1 kHz)	0.007 %* at 105 watts output (* Measured by JVC Audio Analysis System)
Frequency Response (8 ohms)	20 Hz to 20 kHz (±0.5 dB) 10 Hz to 30 kHz (±1 dB)
	PHONO CD, TAPE 1, TAPE 2, VCR, VIDEO 1, VIDEO 2
Signal-to-Noise Ratio ('66 IHF/'78 IHF)	PHONO CD, TAPE 1, TAPE 2, VCR, VIDEO 1, VIDEO 2
RIAA Phono Equalization	
Audio Input Sensitivity/Impedance (1 kHz)	PHONO CD, TAPE 1, TAPE 2, VCR, VIDEO 1, VIDEO 2
Audio Output Level	TAPE 1, TAPE 2, VCR 230 mV
Video Input Sensitivity/Impedance	VCR, VIDEO 1, VIDEO 2 1 Vp-p/75 ohms
Video Output Level	VCR, MONITOR OUT 1 Vp-p (at 1 Vp-p input)
Synchronization	Negative
Signal-to-Noise Ratio	45 dB

FM tuner (IHF)	
Tuning Range	87.5 MHz to 108.0 MHz
Usable Sensitivity	10.8 dBf (0.95 µV/75 ohms)
50 dB Quieting Sensitivity	16.3 dBf (1.8 µV/75 ohms) 38.3 dBf (22.5 µV/75 ohms)
Signal-to-Noise Ratio (IHF-A weighted)	80 dB at 85 dBf 73 dB at 85 dBf
Total Harmonic Distortion	0.15 % at 1 kHz 0.2 % at 1 kHz
Stereo Separation at REC OUT	40 dB at 1 kHz
Capture Ratio	1.5 dB
Alternate Channel Selectivity	60 dB (±400 kHz)
Frequency Response	30 Hz to 15 kHz: (±0.5 dB, -3 dB)

AM tuner

Tuning Range	530 kHz to 1,710 kHz
Usable Sensitivity	300 µV/m 30 µV
Signal-to-Noise Ratio	50 dB (100mV/m)
	Loop antenna External antenna
General	
Power Requirements	AC: 120V [~] , 60 Hz
Power Consumption	370 watts/510 VA 5 watts (in standby mode)
Dimensions (W x H x D)	435 x 156 x 399 mm. (17 3/16 x 6 1/16 x 15 1/4 inches)
Weight	13.5 kg (29.8 lbs)

Pin No.	Symbol	I/O	Description	Pin No.	Symbol	I/O	Description
1	FAN OFF	I	FAN check signal. L:FAN is stopped	43	DATA	O	Data for IC411,321,552 and IC096
2		--	GND	44	INH IN	I	Inhibit signal input
3	AC POWER	O	RY201 control signal	45	RDS CLK	I	Clock input for IC191
4	FAN ON	O	FAN control signal. L:FAN ON	46	RDS DATA	I	Data signal for IC191
5	STAND-BY LED	O	STAND-BY indication control	47	RDS RESET	I	Reset signal for IC191
6	KO6	O	Key matrix out	48	RM IN	I	Detection for protector
7	KI0	I	Key matrix in	49	RDS D-START	I	D.Start signal for IC191
8	KI1	I	Key matrix in	50	STEREO IN	I	STEREO indication control
9	KI2	I	Key matrix in	51	TUNED IN	I	TUNED indication control
10	KI3	I	Key matrix in	52	CE (PLL)	O	Chip select signal for IC121
11	D9/KO0	O	Grid control signal (Key matrix out)	53	CLK (PLL)	O	Clock output for IC121
12	D8/KO1	O	Grid control signal (Key matrix out)	54	DI (PLL)	I	Data to IC121
13	D7/KO2	O	Grid control signal (Key matrix out)	55	DO (PLL)	O	Data for IC121
14	D6/KO3	O	Grid control signal (Key matrix out)	56	DCS IN	I	Compulink signal input
15	D5/KO4	O	Grid control signal (Key matrix out)	57	DCS OUT	O	Compulink signal output
16	D4/KO5	O	Grid control signal (Key matrix out)	58	SOURCE E.IN1	I	R. Encoder control signal input (SOURCE)
17	D3	O	Grid control signal	59	SOURCE E.IN2	I	R. Encoder control signal input (SOURCE)
18	D2	O	Grid control signal	60	DAP RESET	O	Reset signal for IC096
19	D1	O	Grid control signal	61	DAP REQ	O	Request signal for IC096
20	SEA LED	O	SEA indication control	62	SCL(AT24C)	I	Clock for IC412
21	SUR.LED	O	SURROUND indication control	63	SDA(AT24C)	I/O	Data signal for IC412
22	TAPE2 LED	O	TAPE2 MONITOR indication control	64	TV CONT.	O	AV COMPULINK
23	VPP	--	Power supply	65	TV OUT	O	AV COMPULINK
24	S1	O	Segment control signal	66	VCR OUT	O	AV COMPULINK
25	S2	O	Segment control signal	67	VCR IN	I	AV COMPULINK
26	S3	O	Segment control signal	68	RST	I	Reset signal input
27	S4	O	Segment control signal	69	X1	--	GND
28	S5	O	Segment control signal	70	X2	--	Not used
29	S6	O	Segment control signal	71	VSS	--	GND
30	S7	O	Segment control signal	72	OSC2	--	Oscillation terminal
31	S8	O	Segment control signal	73	OSC1	--	Oscillation terminal
32	S9	O	Segment control signal	74	VDD	--	Power supply
33	S10	O	Segment control signal	75	CHIP SELECT	--	GND
34	S11	O	Segment control signal	76	TUNER E.IN1	I	R. Encoder control signal input (TUNER)
35	S12	O	Segment control signal	77	TUNER E.IN2	I	R. Encoder control signal input (TUNER)
36	S13	O	Segment control signal	78	DAP BUSY	I	Busy signal from IC096
37	S14	O	Segment control signal	79	CS(XR)	O	Chip select signal for IC404
38	S15	O	Segment control signal	80	SP CLK(XR)	O	Clock output for IC404
39	S16	O	Segment control signal	81	SP DATA(XR)	O	Data signal for IC404
40	STB2	O	Strobe signal for IC411	82	STB3	O	Strobe signal for IC552
41	CLK	O	Clock output for IC411,321,552 and IC096	83	VIDEO OFF	O	VIDEO OFF control signal
42	STB1	O	Strobe signal for IC321	84	VCR S/C	I	VCR S/C signal

■ TMP87C847U-4195 (IC096) : CMOS 8-bit Microcontroller

2. Block Diagram

3. Pin Functions

Pin No.	Symbol	I/O	Functions
1	P73 (SCK)	I	Serial clock input from IC401
2	P72 (PWM/PDO)	I/O	Not used
3	P71 (INT4)	I/O	Not used
4	P70 (INT3/TC3)	I/O	Not used
5	P07 (ACK)	I	Acknowledge signal input from IC081
6	P06 (IFCD)	O	Command/data switching signal to IC081

Pin No.	Symbol	I/O	Functions
7	P05 ($\overline{\text{CS}}$)	O	Chip select signal output to IC081
8	P04 ($\overline{\text{RST}}$)	O	Reset signal output to IC081
9	P03 (TEST0)	I	Test terminal, generally it is used as "L"
10	P02 (TB2)	I	Test terminal, generally it is used as "L"
11	P01 (TB1)	I	Test terminal, generally it is used as "L"
12	P00 (TB0)	I	Test terminal, generally it is used as "L"
13	TEST	I	Test pin for out-going test. Be tied to low
14	$\overline{\text{RESET}}$	I	Reset signal input or watchdog timer output/address-trap-reset output/system-clock-reset output
15	XIN	I	Resonator connecting pins for high-frequency clock. For inputting external clock, XIN is used and XOUT is opened
16	XOUT	O	Not used
17	VSS	--	GND
18	VAREF	--	Analog reference voltage
19~26	P60 (AIN0)~ P67 (AIN7)	I/O	Not used
27	P50	O	Not used
28	P51 (MUTE)	O	Mute signal output
29	P10 (INT0)	I/O	Not used
30	P11 ($\overline{\text{REQ}}$)	I	External interrupt request signal from IC401
31	P12 ($\overline{\text{BUSY}}$)	O	Busy output to IC401
32	P13 (DVO)	I/O	Not used
33	P14 (PPG)	I/O	Not used
34	P15 (VOL STB)	O	Volume strobe signal output for write data to IC341
35	P16 (VOL SI)	O	Volume serial data signal output to IC341
36	P17 (VOL CK)	O	Volume clock output for data transfer to IC341
37	P20 (INT5/STOP)	I/O	Not used
38	P21 (XTIN)	I/O	Not used
39	P22 (XTOUT)	I/O	Not used
40	VDD	--	Power supply (5V)
41	P77 (IFDI)	O	Serial data output to IC081
42	P76 (IFCK)	O	Shift clock output to IC081
43	P75 (SO)	I/O	Not used
44	P74 (SI)	I	Serial data input from IC401

■ TC9332F-010 (IC081) : Audio digital signal processor

1. Terminal Layout

2. Block Diagram

3. Pin Functions

Pin No.	Symbol	I/O	Functions
1~3	TP8~TP6	O	Test data output, Generally it is used as open
4	VDD	--	Power supply
5	VSS	--	GND
6~11	TP5~TP0	O	Test data output. Generally it is used as open
12	VSSR	--	GND for inner delay RAM (DLRAM)
13	VDDR	--	Power supply for inner delay RAM (DLRAM) (5V)
14	VSS	--	GND
15	SDO2	O	Not used
16	SDO1	O	Serial data output to IC061

Pin No.	Symbol	I/O	Functions
17	SDO0	O	Serial data output to IC041
18	SDI1	I	Not used
19	SDI0	I	Serial data input from IC021
20	LR	O	LR clock output (1fs)
21	WCK	O	Word clock output (2fs)
22	FS32	O	Bit clock output (32fs)
23	FS64	O	Bit clock output (64fs)
24	EBC0	I	Bit clock input. Shift clock input for SDO 0/1/2 data output
25	EBCI1	I	Bit clock input. Shift clock input for SDI 0/1 data input
26	EBCI0	I	Bit clock input. Shift clock input for SDI 0/1 data input
27	ELRO	I	LR clock input for SDO 0/1/2 data output
28	ELRI1	I	LR clock input for SDI 0/1 data input
29	ELRI0	I	LR clock input for SDI 0/1 data input
30	SYNC	I	Synchronizing signal input. SYNC signal edge sets program counter "0" forcefully. The microprocessor controls the polarity
31	VDD	--	Power supply (5V)
32	XI	I	X'tal oscillation terminal
33	XO	O	X'tal oscillation terminal
34	VSS	--	GND
35	CKSL	I	Oscillation clock switching terminal L:384fs, H:512fs
36	PLOFF	I	Oscillation mode switching terminal for 'Xtal and VCO. Built-in VCO oscillation mode in "L" and 'Xtal oscillation mode in "H"
37	PD	I	Phase comparison data output
38	VSSA	--	Analog GND
39	AMPO	O	Amplifier output for L.P.F
40	AMPI	I	Amplifier input for L.P.F
41	VDDA	--	Analog Power supply (5V)
42~44	TES0~TES2	I	Test terminal, Generally it is transmitted from μ -com when cs is lactive
45	$\overline{\text{RST}}$	I	Reset signal input from IC096
46	$\overline{\text{CS}}$	I	Chip select signal input from IC096
47	IFCD	I	It selects command or data input mode from IC096. It recognizes the command in "H" and the data in "L"
48	IFDI	I	μ -com data input. Firstly, LSB of data and command are received.
49	IFDO	O	Data output of data bass. LSB of data bus data is transmitted to μ -com
50	IFCK	I	Shift clock input form IC096
51	$\overline{\text{ACK}}$	O	Acknowledge signal output for IC096. Acknowledge signal is output when command and data's parity are OK
52	VSS	--	GND
53~60	TP16~TP9	O	Test data output. Generally, it is used as open

3. Pin Functions

Pin No.	Symbol	I/O	Functions
1	SFOR	I	Input for selectiing serial interface output format. HIGH=Format 1 LOW=Format 2
2	STD	I	Input for selectiing STANDBY mode HIGH=Normal operation LOW=STANDBY (Low power consumption)
3	OVL	O	Overload indication output. This pin indicates whether the internal digital signal is within 1dB of maximum. In STANDBY mode this output is in high impedance
4	CKIN	I	System clock input from IC093
5	VDD	--	Supply for the digital section (5V)
6	VSS	--	Ground supply for the digital section
7	SDO	O	Serial interface data output to IC081. In STANDBY mode this output is in high impedance
8	SWS	I	Serial interface word select signal. This pin is the word select input to the serial interface.
9	SCK	I	Serial interface clock. This pin is the input for the external bit clock.
10	TEST1	I	Test input 1. This pin should be left open circuit
11	HPEN	I	High pass filter enable input. (HPEN HIGH=enabled). If unconnected this pin defaults HIGH
12	TESET2	I	Test input 2. This pin should be left open circuit
13	VSSA	--	Ground supply for the analogue section
14	IREF	--	Current reference node
15	VREFR	--	VDDA/2 reference generator for the right channel analog section
16	BIR	I	Buffer op-amp inverting input for right channel
17	BOR	O	Buffer op-amp output for right channel
18	VDACN	I	Negative 1 bit DAC reference voltage input, normally connected to 0V
19	VDACP	I	Positive 1 bit DAC reference voltage input, normally connected to 5V
20	BOL	O	Buffer op-amp output for left channel
21	BIL	I	Buffer op-amp inverting input for left channel
22	VREFL	--	VDDA/2 reference generator for the left channel analog section
23	VDDA	--	Supply for the analog section (5V)
24	SLAVE	I	Input for selectiing serial interface operating mode MASTER/SLAVE HIGH=SLAVE, LOW=MASTER If unconnected the pin will default LOW

1. Terminal Layout

2. Pin function

Pin No.	Symbol	Function
1~5,9~16	A1~A13	Anode terminal
30~38	G1~G9	Grid terminal
25	RIN	Right channel input
26	LIN	Left channel input
22	DIM	Brightness control varies width of G outputs.
27	GPH	Filter amplitude display duration control. A resistor and timing capacitor from this pin to VSS adjust Peak Hold Decay Time.
28	TPH	Total output display on / off control.
40	CLKR	Oscillator timing resistor between this pin and CLKC pin.
41	CLKC	Oscillator timing capacitor between this pin and VSS.
20	S1	Chip select 1 pin.
21	S2	Chip select 2 pin.
19	DI	Serial port data.
18	SPCLK	Serial port clock.
17	CS	Chip Select.
42	VDD	Plus supply, nominally 5VDC.
23	VSS	Minus supply, nominally -5VDC.
24	GND	Analog input reference.

3. Block Diagram

■ LC7218M (IC121) : PLL Synthesizer

1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC401.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC201.

2. Terminal Layout

3. Block Diagram

4. Pin Functions

Pin No.	Symbol	I/O	Functions
1,24	X in , X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC401).
4	CL	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218JM to the controller which is synchronized with CL.
6	SYNC	—	Not used.
7	TUNED	I	Receive the tuned signal from IC102 (LA1836M).
8	STOP IN	—	Connected to GND
9	POWER	—	Not used.
10	QSC	—	Not used.
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	O	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC102 (LA1836M).
16	FM-IF	I	Universal counter input for FM-IF from IC102 (LA1836M).
17	IF REQ	O	Output the "IF-signal request" to IC102 when the pin-7 (tuned in) goes to "H".
18	AM OSC	I	Input the local oscillator signal of AM.
19	FM OSC	I	Input the local oscillator signal of FM.
20	V _{DD}	—	This is a terminal of power supply.
21	PD1	O	PLL charge pump output : When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	—	Not used.
23	V _{SS}	—	Connected to GND

3. Pin Function

Pin No.	Symbol	I/O	Function
1	FM IN	I	This is an input terminal of FM IF Signal.
2	AM MIX	O	This is an output terminal for AM mixer.
3	FM IF	I	Bypass of FM IF
4	REG	—	Register value between pin4 and pin28 desides the frequency width of the input signal.
5	AM IF	I	Input of AM IF Signal.
6	GND	—	This is the device ground terminal.
7	SIG	O	When the set is turnning, this terminal becomes "L".
8	ST/AM IF	O	Stereo indicator output. Stereo : "L", Mono : "H"
9	FM DET	—	FM detect transformer.
10	VCC	—	This is the power supply terminal.
11	FM/AM IF //MUTE	O/I	When the signal of IF REQ of IC121(LC7218JM) appear, the signal of FM/AM IF output. //Muting control input.
12	VSM	O	S Meter output and adjust AM SD sensitivity.
13	AM C.F.	O	This is a terminal of AM ceramic filter.
14	FM/AM	I	Change over the FM / AM input. "H" : FM, "L" : AM
15	MONO/ST	O	Stereo : "H", Mono : "L"
16	L OUT	O	Left channel signal output.
17	R OUT	O	Right channel signal output
18	L IN	I	Input terminal of the Left channel post AMP.
19	R IN	I	Input terminal of the Right channel post AMP.
20	MPX L OUT	O	Mpx Left channel signal output.
21	MPX R OUT	O	Mpx Right channel signal output.
22	MPX IN	I	Mpx input terminal.
23	VCO	I	Voltage controlled oscillator terminal.
24	DET OUT	O	AM/FM detection output.
25	AM DET	—	AM low cut adjustment.
26	AM AGC	I	This is an AGC voltage input terminal for AM.
27	AM RF	I	This is an input terminal for AM RF signal.
28	AFC	—	This is an output terminal of voltage for FM-AFC.
29	AM OSC	—	This is a terminal of AM Local oscillation circuit.
30	OSC BUFFER	O	AM Local oscillation Signal output.

Disassembly Procedures

(1) Removing the top cover

1. Remove 4 screws ① fastening both sides of top cover, and 3 screws ② fastening the rear side.
2. Remove the top cover.

(2) Removing the Bottom Cover

1. Remove 13 screws ③ and ③".
2. Remove the bottom cover.

※ The screw ③" which secures the bottom cover is also used for ground.
It is necessary to ground before checking after the bottom cover is removed.

① .. E61660-004

② ... E73273-006

③,③" SBSG3008CC

(3) Removing the Front Panel Assembly

1. Remove 3 screws ③ fastening top of the front panel, and 4 screws ④ fastening bottom of it.
2. Remove the Master volume knob, Center tone knob and Balance knob.
3. Remove the nut fastening the Master volume.
4. Remove the front panel disconnecting some wires. (JB441,P704,P311,P222,P271)

(4) Removing the Front P.C. Board

1. Removing the front panel assembly.
2. Remove 9 screws ⑤.
3. Remove 2 nut fastening the rotary encoder.
4. Remove the front P.C. Board.

(5) Removing the Rear Panel

1. Remove 20 screws ⑥, ⑥" and ⑦.
2. Remove 2 screws ③ fastening bottom sides of rear panel.
3. Take it out.

※ 3pcs. of screw ⑥" which secure the rear panel are also used for ground.
Installing of those screws is required before checking.

⑥, ⑥" E73273-006

③ SBSG3008CC

④ SDSG3008M

⑤ SDSF2608Z

⑦ SBST3006M

- (6) Removing the Power Transistor
- 1. Remove the top cover and bottom cover.
 - 2. Unsolder the broken transistor.
 - 3. Remove the some screws ㉔ fastening it.
 - 4. Remove it.

㉔ .. E73525-003

ADJUSTMENT PROCEDURES

■ Tuner section

Tuning range

Area	Range	
	MW (kHz)	FM (MHz)
the U.S.A., Canada	530~1710	87.5MHz~ 108MHz
Australia	522~1629	
Universal type (AM Channel space 9kHz)	531~1602	
Universal type (AM Channel space 10kHz)	530~1600	

- (1) Tuning Voltage
- Confirm the voltages in the table at TP101.

FM Tuning voltage (Unit : V)

Area	Frequency	
	87.5MHz	108MHz
the U.S.A., Canada, Australia, Universal	1.6±1.0	8.0±2.0

AM Tuning voltage (Unit : V)

Area	Frequency (MW)						
	522KHz	530KHz	531KHz	1600KHz	1602KHz	1629KHz	1710KHz
the U.S.A., Canada	—	1.0 > 0.5	—	—	—	—	8.0±0.8
Australia	1.0 > 0.5	—	—	—	—	7.5±0.8	—
Universal (Chanel space9kHz)	—	—	1.0 > 0.5	—	7.2±0.7	—	—
Universal (Chanel space10kHz)	—	1.0 > 0.5	—	7.2±0.7	—	—	—

- (2) FM Center meter
- Receive a broadcast by using the function of 'AUTO STOP'.
- Adjust T141 (Detector coil) so taht the voltage at TP102 becomes 0±1.5mV.

■ Power Amplifier section

■ Idling current

- (1) Set the volume control to minimum during this adjustment.
- (2) Turn R791 and R792 fully counterclockwise to warm up before adjustment.
If the heatsink is already warm from previous use the correct adjustment can not be made.
- (3) Connect a DC voltmeter to R773 resistor's leads for left channel, or to R774 for right channel.
- (4) Adjust R773 for left channel, or R774 for right channel, so that the DC voltmeter becomes 1mV~10mV.
